Tire and Rubber Marking Crayons

Repair Crayon

C-9000

APV's Tire and Rubber Repair Crayons are ideal for those operating in tire, rubber, hose, and automotive industries. The product has zero VOCs and is used to disguise imperfections, such as scuff marks and chalk marks, on a cured rubber surface. Because of this, it can help manufacturers reduce defects and waste.

C-9000 Repair Crayons are applied by hand and very easy to use. The product is sold in a paper cup, which can be easily torn off as the crayon wears during use. Repair Crayons are purchased by the pound.
