

BLOCKSEAL

LIQUID FLASHING

BLOCKSEAL is a liquid-applied, waterproof coating that seals window and door substrates in new and existing applications. It is a water-based, low VOC, acrylic adhesive that provides excellent adhesion on a wide variety of surfaces including: weathered wood, shakes, plywood, clapboard, primed metal, galvanized, urethane, polyester, adobe, brick, stucco, concrete, masonry, slate, slab, and various other substrates.

This high-resin formula with ceramic pigments creates a watertight seal, keeping moisture from penetrating door and window openings beneath the exterior façade of the structure. BLOCKSEAL is intended for residential, commercial and industrial applications
